Jena, Germany. JeNaCell, an Evonik company, launches the wound dressing epicite® balance onto the German market. Available from June 2023, the dressing is particularly suited and optimized for the treatment of chronic wounds with low to medium exudation, such as venous leg ulcers, arterial leg ulcers, diabetic foot ulcers, pressure ulcers and soft tissue lesions. epicite® balance comes in three different sizes and will be distributed through the company Coopmed ApS to hospitals and homecare centers.

“epicite® balance offers new treatment options for chronic wounds. The isotonic saline solution creates a moist wound environment, while the biosynthetic cellulose matrix can absorb wound exudate,” says Dr. Dana Kralisch, General Manager of JeNaCell and co-developer of epicite® balance. “Chronic wounds are often called the silent epidemic. They are affecting up to two percent of the population in industrialized countries, especially elderly patients.”

epicite® balance is made of biosynthetic cellulose, a hydropolymer for innovative medical device applications. The dressing enables superior wound cleansing effects and reactivates the healing of slow-healing wounds. epicite® balance is manufactured in Germany by JeNaCell via a proprietary fermentation process using renewable carbon sources.

This wound dressing is the latest addition to JeNaCell's portfolio. The Evonik company focuses on developing and producing biosynthetic cellulose for medical device applications, implants, and drug delivery. JeNaCell was originally founded in 2012 as a
